

MAX EDI Translator

Function :

The EDI Translator will extract invoice data from MAX and send it through a Value Added Network provider to your trading partners. This solution is for smaller companies who may have several EDI trading partners but do not want to outsource the usual EDI support functions. There is no need to invest in EDI software or have any extensive EDI knowledge in-house.

Installation:

From Windows: Run Setup (the CD will autostart if you have this feature.)

The first time or to change enter the path to the MAX data.

Hits	CustID	Customer Name	Invoice	Date
1	MDS	MATRIX DATA SYSTEMS, INC.	000001	5/19/95

Processing can be for a selected invoice or for all invoices created on or after a selected date. The "Rerun" option allows for re-processing of invoices that have already been sent. "AutoSend" tells the application to send the data using the modem or to simply store the file for sending later.

Invoice# 000001
CustID MDS
Name MATRIX DATA SYSTEMS, INC.
PO# 00812
Invoice Amount 4947
Ship Weight 107

Certain customers can be coded to prompt for external data such as weight, SCAC, etc. as the invoices are processed.
