## MAXToolKit August Software Updates

On Thursday, August 11, updates will be released for Quick Data Loader and PickPro. These are software only updates. There is no data upgrade process required. If you have installed MAX Workbench V16.3.3 updates for Quick Data Loader and PickPro will be installed automatically if you have MAX Workbench configured for auto updates. For detailed installation instructions [click here](#).

---

Below are enhancements included in the updates. For a complete list of changes to an application view the Change Log.

### Quick Data Loader

[View the complete change log](#)

- Added the Lot\_Tracking\_History table to the Static Tab
- Removed the dependency for the Access DB Engine
- Added length verification of text files during order import

### Pick Pro

- Added a setting to allow the user to specify the number of the next sequence increment

---

## In the Pipeline

**LeanMAX** is a series of tools that provide efficient methods to accomplish the following: Consolidated Planning and Picking; Kanban purchased component replenishment; and Back Flush by Operation. We are in the process of evaluating requests and suggestions for additional lean manufacturing capabilities for a future upgrade of **LeanMAX**. If you have lean manufacturing requirements or suggestions please send them to [info@bptechnologies.com](mailto:info@bptechnologies.com).
