MAXToolKit July Software Updates

On Thursday, July 14 updates will be released for Package Shipping, MAX ID Changer, and Quick Data Loader. These are software only updates. There is no data upgrade process required. If you have installed MAX Workbench V16.3.3 and have it configured for auto updates, updates for MAX ID Changer and Quick Data Loader will be installed automatically. For detailed installation instructions click here.

Below are significant enhancements included in the updates. For a complete list of changes to an application view the Change Log.

Package Shipping
View the complete change log

- Added the option to write tracking numbers to Sales Order Notes

MAX ID Changer
View the complete change log

- Added a third optional column to the XRef input file for the part description. If the third column is specified, in addition to replacing the original part identifier, MAX ID Changer will update the part description.

Quick Data Loader
View the complete change log

- Added fields COMNT1_27, COMNT2_27, COMNT3_27, ADDR3_27, ADDR4_27 to Sales Order Import
- Added Part_Master_Ext insert during the BOM Load
- Added generation of blank templates for Sales Orders, Purchase Orders, Non-Inventory Purchase Orders and Work Orders.

In the Pipeline

LeanMAX is a series of tools that provide efficient methods to accomplish the following: Consolidated Planning and Picking; Kanban purchased component replenishment; and Back Flush by Operation. We are in the process of evaluating requests and suggestions for additional lean manufacturing capabilities for a future upgrade of **LeanMAX**. If you have lean manufacturing requirements or suggestions please send them to info@bptechnologies.com.
