

SuperZap

Eliminate risk and protect the integrity of your MAX ERP data with the click of the SuperZap button!

Maintaining accurate data is crucial to your success. No matter your type of business, it relies on the integrity of your data. Typically, removing data from your system can be a scary endeavor. Plus, excessive unneeded data can slow down processing, clutter and delay reporting all while creating risk.

MAX ERP software consists of sets of data tables that are purposely built upon each other. MAX ERP is built to complain and not allow you to remove a part number that is used in another table. This protects what is called “referential integrity”.

⚠ Without SuperZap, eliminating unneeded MAX Part, Customer, Vendor and Bill of Material records is problematic. Even if you could purge data, the process of locating all related data would be extensive and tedious.

⚡ With SuperZap, easily select which Parts, Customers, Vendors or BOMs to zap and quickly remove the data you don't need in seconds. SuperZap gives you the safety of requiring your acceptance of qualifying criteria to prevent the removal of records that should not be removed.

Features

- **Flexibility** | Browse to select precisely what you want to remove or use a text file to remove a list of records
- **Integration with MAX ERP** | Remove what you need without impacting other data
- **Reliability** | Sweep up crumbs and know that every historical transaction including the old data is removed

Benefits

- **Identify** | Set qualifications to easily select records to be purged
- **Confirm** | SuperZap ensures no open transactions include the selected data

Optimize Performance | Excessive unneeded data takes time to process – improve performance with a leaner database

Simplify the process, reduce the risk, and protect the integrity of your data by using SuperZap for MAX!
